Similar apps like appvalley for android

The Android operating system and its apps are constantly updated. Sometimes these patches include simple optimizations, new features, or security fixes and code customizations to protect your information. To update apps on Android manually or automatically, Connect to Wi-Fi or use a 3G or 4G LTE cellular connection to update the operating system and apps. Use Wi-Fi if you have limited data usage. The following information should apply no matter who made your Android phone: Samsung, Google, Huawei, Xiaomi, etc. If you want to update an app manually, go to Google Play. Here's how: Open the Google Play Store app. Select Menu (the icon that looks like three horizontal lines), then select My Apps & Games. If necessary, select the Updates tab, and then do one of the following: Tap Update All to download patches for all apps that have updates available. Tap Refresh next to a specific app to update that app only. Want to know what's new in the updated app? Tap the down arrow to the right of the app name to find out. You may be prompted to accept an app's terms of use. Read the list of collected information or peripherals it accesses, and then tap Accept to complete the update. Your mobile device can automatically update apps when an update becomes available. Give your device permission to continue without your help. Here's how to do it: Open the Google Play Store app. Select Menu & Settings. Select Update apps automatically, and then choose how you want to update. Your options are: Over any network (data charges may apply). Only via Wi-Fi. To turn off auto-updates, do not select Update apps automatically. Select Done when you're done. Wondering which version of Android your smartphone or tablet has? You need to know this information if you need to prepare your device before upgrading it, or if an app needs a specific android version. To find this information: Microsoft Launcher Google Now Apex We have selected three great Android Launcher alternatives for you to check out. Microsoft Launcher is a clean and confusing solution, with a focus on stylish looks and a handy button that you press to change your wallpapers with Bing's carefully selected daily images. It comes with a neat page area where you can get a ton of useful widgets: current and popular contacts, settings reminders, weather warnings and so on. Arrow also has a swipe up from the lower which brings a menu like Control Center on the iPhone, which is definitely useful (but this particular element of the launcher tends to stutter on some phones). The Google Now launcher is probably the best way to look at the stock and contemporary NAndroid as Google itself sees it. With the latest update, the Google Now Launcher allows you to normalize icon sizes, so there are no longer large icons as opposed to many small ones, and it even makes it possible to use your phone in landscape mode (which we find awesome). Apex Launcher has long been the First Nova Launcher Alternative and offers a similar level of and adaptation. Pixel Belle Delta Polycan Take these iPhone users -- you can change your icons on Android! If you're already using a custom launcher, you can download one of the many icon packs available in the Play Store (most are free or cost a dollar). We love the Pixel Icon Pack that brings the cool graphics of Android Nougat to your device, and we've made three of our last favorites available for you to check out, but feel free to explore the Play Store and find the one that best suits your style. Wallpapers from Google Muzei Wonderwall Unfortunately, most phones these days do not come out of the box with almost enough customization options, and often the selection of wallpapers built on the phone is very limited. Luckily, there are some killer wallpaper apps on Android that can really wake up and feel their screen to life... Personally, Wallpaper from Google is one of the best options with a selection of trendy wallpapers (including catchy edge view of our beautiful planet Earth) that will rotate the app on a daily basis. Then we have Muzei, developed by Google engineer Roman Nurik. Muzei has recently been updated by adding the integration with notification drop-down icons in Android 7 Nougat, and it's now more stable. The app allows you to set a little blur to your wallpapers so that the image does not distract from your apps. This gives you a gradient-like look that sets a mood but doesn't distract you. Last but not least we have Walp, an app that has amassed all stock wallpapers from various popular (and not so popular) phones. Needless to say, these are all very high quality wallpapers that are worth a visit. Zooper Zooper Widget offers one of the best options for fully customizable widgets: you can customize widgets to any background and style as it is easy to choose different backgrounds, fonts and styles for clock, calendar, time, weather and a range of other information that is widget-enabled. The other great widget app is KWGT, and both solutions come with a ton of add-ons and extensions that will make your device unique and more functional via some creative widgets. Google Photos Google Photos brings a small revolution in image storage and sharing; it comes with unlimited cloud storage for images up to 16 megapixels (and you can choose to zoom out and very easily compress larger images) and for videos up to 1080p. It also makes sharing images and albums extremely easy and works equally well on all platforms: iOS, Android, the web, and literally everything else with a browser. Finally, it also has a brilliant new selection option that allows you to pull your finger such as a computer mouse. Quite magically, it also allows you to search for (and actually find) images by simply typing a few words like animals that filter out all the images of animals in your photo collection. Magic Google Photos is probably the best app to keep your photos in the cloud, but when it comes to simplicity of the QuickPic is still the way to go on Android. Its mostly positive reviews show that simple works: it is a lightweight app with modern design and it connects to online storage servers. Snapseed was acquired by Google a few years ago for good reason: it has an interface that allows you to easily edit images on your phone with an intuitive swipe-based interface. You have the powerful ability to make selective adjustments so that you can tap a specific point and edit only a specific part of an image, not the whole thing. Snapseed is ad-free, works smoothly and is probably the best way to edit photos on Android. VSCO Cam is an app from the Visual Supply Company, a company known for developing some of the best movie emulation filters for Adobe Lightroom, and it's no surprise that this expertise has led to a collection of amazing filters that you can get in VSCO Cam. The beauty of THE VSCO filters (or presets rather) is in the subtle measure of artistic effects that will help you get a sense of the right amount of touch-ups needed for a photo, and also help you avoid overediting your images. CamScanner is a great app if you want to make sure that all the important documents you have are scanned and stay securely in the cloud (and thus make sure we mean away from thieves, maybe not so much from the NSA). CamScanner allows you to scan and modify them so that they look like high quality PDFs, not taking some cheap pictures on your phone. 500px Flickr EyeEm If you are looking for a place to share your photos, see other pictures, and take part in a photo forum that would enhance your photography, 500px and Flickr are two of our favorite places to visit. Both have new and modern apps with great visual style and both run very smoothly on Android. A third option we like to use is EyeEm, an app that offers a more dynamic community where you can see highlighted photographers and find inspiration. GoPro's move to the software territory started with the Quik video editing app and it's an excellent solution that creates automatically appealing video compilations that you can then easily share. Magisto is another established video maker that will add and revivie music and effects to your videos. VLC is known as the video player that can easily chew through all kinds of format with ease on the desktop, and it is similarly excellent on the phone. After years of testing, the app is out of beta and works solidly. Our previous favorite app, the MX Player, has been around for years and remains a great video player use again and again. Its swipe-based interface is tailor-made for touch devices: swipe left and right to jump backwards and fast forward; Swipe up or down (on the right half of a device) to adjust the volume, and swipe up or down on the left half to adjust the brightness. Spotify needs little introduction. The music subscription service, worth 10 US dollars, allows you to listen to, listen to, listen to more than 20 million songs indefinitely and without ads, Model that comes to replace the current buy-to-let album one. You also have Spotify for free, which doesn't require a paid subscription, but introduces ads and restrictions. Sometimes you have to do something as simple as trimming a part of a song. We've found that Lexis Audio Editor does a good job as a wave editor, so you can precisely trim your creations and easily export them. If you're a Djay, chances are you won't rely on your phone, but if you're on the go or something goes wrong, Android has dJaz2. The application works great on modern phones (and not so well on slightly older devices), and if it works, it allows you to have many options: from slowing down and accelerating songs to some imaginative mixing techniques. If you are making music and want to create some beats on the go, Nanoloop is one of our favorite tools on Android. Nanoloop combines sequencers, synthesizers and samplers in one package, and it's a very minimal but beautifully made tool to create electronic music. When a music professional searches for an app that helps you work on more complex projects, you can always rely on Caustic 3 and FL Studio Mobile. These complex apps work better on a well-powered tablet, where the extra screen space is a welcome addition. Signal is a messaging app that lets you have private conversations via both SMS and voice calls. It is free, supports group calls and texts and allows you to share media. Best of all, it's open source, so you can be sure that all encryption is done in the right way and the government's ever-longer hands won't reach your private life. The server also never has access to your communications and never stores data. The creator of the Russian social network VK.com Pavel Durov has now been officially removed from running his own product, but he has focused on creating Telegram, a secure messaging app. The app uses encryption and although it's not as hard-proof as Signal, it's a popular solution that seems safer than most other messengers out there. AccuBattery is a detailed battery application that provides an estimate of battery life for your device and is extremely useful for nailing which app consumes how much battery resources. It's simple, well-designed and there's both a free and a paid option (we recommend getting the latter). Greenify is a simple battery management app that ensures that no app abuses the system by taking out too many resources. It warns you against this and allows you to keep an eye on your battery life BitDefender Norton Avast Let's make one thing clear: If you don't go to third-party apps or open shady files that you don't know about, there's NO NEED to worry about antivirus apps on Android. The clever sandboxing mechanism on which the platform is built makes Android very secure. But if you have some doubts about your device, these three are the best antivirus apps. BitDefender has a high price, but does an excellent job, while Norton is a App that you can explore, and Avast is a nice third option to have. Google Drive is deeply integrated into the Android platform and it is an excellent service. Today, we rarely use cables to transfer files: they simply sent them to this clean cloud app with 15 GB of free storage that would be enough for many people. You can also buy a 2Gb/month plan that gives you 100GB of storage space, or provision 10 USD per month for 1TB of cloud storage. Then you have Dropbox, which also offers an easy-to-use app with a 1TB storage option that costs USD 100 per year. It's an equally excellent choice and it's up to you to decide which one you like better (we stay with Google Drive because it's integrated with other Google services). Asus File Manager File Explorer Astro Google's new Files Go File Manager app might still be in beta, but it works great, has a clean interface and comes with superpowers like the ability to quickly send large files between two devices. It also helps you to easily free up space on your device. Other options that are worth considering are the following: Asus' File Manager app allows you to get your files in an organized way and it's free and feature rich. Our other two go-to options are NextApps File Explorer or Astro File Manager, which offer a slightly different design but very similar functionality. We recently learned that AirDroid, our go-to app for wirelessly transferring files between our laptops and phones, was not as secure as it should have been. Some updates have happened in the meantime, but that was enough to push it to second place, behind the pretty excellent AirMore, which offers almost identical functionality without all the fluff AirDroid has recently added. LastPass keeps your password and personal information safe. Lock your passwords in a secure vault, fill out web browsers and app logins, and generate new, strong passwords. With LastPass, you only remember one password -- your LastPass Master password. Save logins, create online shopping profiles, generate secure passwords, track personal information in photo and audio notes, and more. 1Password, on the other hand, creates and remembers secure passwords for each website. If you have trouble remembering all the passwords you use, 1Password will do so for you. The new version of the app is fully functional and works on both smartphones and tablets. And if there's one thing we've been learning over the years, it's that security is the biggest concern that mobile device users have. With this app, you can use ridiculously complex passwords (as generated by 1Password), and you can let the app remember them. A virtual private network (VPN) is a great tool for power users in all sorts of cases, from security to access to content that could be blocked for some reason in a particular region. The Opera Free VPN is our favorite Android VPN app for its simplicity and unbeatable price tag free for the basic version. They also have the Turbo VPN as an alternative, another well-advertised application that will do the job well. If you're used to using torrent files for whatever reason, Fluid is probably the best BitTorrent client out there: clean, easy, without download or upload restrictions, exactly according to the material design instructions. It allows you to choose which specific files of the torrent to download, gives you file and folder priorities and has magnet link support. We offer you two ways to turn your phone into smart remote control: whether for destinations to control everything on your laptop/desktop, or whether your phone has an infrared beamer to control your TV or air conditioning. Sometimes laziness can feel good. 7 Minute Workout Finally, since we always have our phones in our pocket, it's worth using them for something that actually benefits our health: for our workouts. We have a hard time recommending a full-bodied gym app for mobile phones as we believe that a gadget has no place in the gym where you exercise, but for light workouts and as a reminder to go for a run or do these famous 7-minute workouts to revive you, while in the office, runkeeper and 7-minute workout are two great apps. ESPN theScore Bleacher Report ESPN has launched a completely redesigned app for Android that offers a wonderfully simplified user-friendly style and allows you to easily stay informed about the latest news around your favorite sports team. Not only that, you get by-the-minute live ticker updates on games, as well as a news section that comes with lots of videos. The focus of the new ESPN app is on the following leagues: MLB, NFL, College Football, NBA, College Basketball, MLS, Cricket and more. If you want more scores, news and analysis, theScore excels at the first, while The Bleacher Report performs very well in the last two. Moves is a motion tracking app with a simple user interface, but most importantly, it doesn't require you to constantly swirl around with it. Just start it once and it will track your steps, rides, cycling, and runs in the background. It will also map your daily activities on a map. The fact that the app was purchased from Facebook shows that you get a lean and smooth experience. We all have these periods when you get sick, and suddenly you find a handful of medications to get better earlier. Medisafe's Meds and Pills Reminder will help you keep track of these medications in a simple and simple way. The Clue Period Tracker is the best application to track your period and while you don't worry if you're a guy, your girlfriend will surely appreciate you'll be showing this useful app to her. Hopper Hopper is a cool flight service that sends you notifications when the time is right to buy a ticket, based on algorithms that predict whether prices are likely to rise, fall or stay sideways in the near future. That's not all there is for the new Hopper for Android, as it's one of most convenient to use designs we've seen from such apps, without unnecessary features and distractions, and with large, easy tap on icons, input fields and calendars. Hopper will feed you airfare notifications only when prices to our place of choice have hit the lowest spot, and are about to go up, so check it out when you travel, it could save you a few dollars on airline tickets. We also like Skyscanner with its eagle-eyed view of various flight and ticket sellers, and it also comes with the promise to give you the best price for your flight. Fashionistas, unte! Well, at least take a look at these two apps that give you a ton of cool new ideas for dressing up and styling. Houzz Houzz is a great hub for ideas for home design and renovation with a variety of images that help you visualize what you want to construct or change before you do a lot of mistakes on your own first. With an excellent letter in the form of a weekly newsletter, Houzz has become our place of departure for those times when only something at home can help us understand the chaos in our minds. Feedly Yahoo News Digest Google News The new Yahoo under Marissa Mayer is an interesting mixture of a technology and a media company, and the Yahoo News Digest application is a brilliant illustration of the direction Yahoo is heading. The app is slim and with thoughtful curation by human editors presents it with a morning and evening digests of the most important news from around the world. We love the idea of having around 10 messages for each digest; you can quickly scroll between the leading topics and get a sense of accomplishment that news junkies who otherwise tend to spend a lot more time digging for news appreciate. If you're someone reading news as a job or a serious hobby, there's no better way to stay up to date than a full-blown newsreader. After the pitiful decline of Google Reader, Feedly has emerged as the first alternative with regular updates, a smooth surface and even a premium plan with even more functionality. GasBuddy Here is a useful app that is very important for travelers who want to charge at the best price anywhere. GasBuddy. This cute little app is especially useful in the United States where you can use it to find the gas station that offers the best deal of all. Why should you need it? Well, if you never leave your hometown and already know all the gas stations there, you probably don't do it, for all other reasons seem pretty obvious. Duolingo has a small revolution in on a mobile device. His simple, repetitive approach works well to introduce you to a language in all four incarnations: reading, writing, speaking, and listening. Duolingo currently allows you to learn Spanish, French, German, Portuguese, Italian, Dutch, Irish, Danish, Swedish and English. We look forward to a similarly easy way to learn Asian languages! Learn! Academy has amassed a large number of lessons in text and video to help you catch on with all sorts of topics: from basic maths to more complicated calculations, all explained within a system that allows you to continue only after you've mastered the content you need. It is a great way to learn, especially for the sciences, but it also applies to the arts. Khan Academy offers articles in mathematics (arithmetic, voralgebra, algebra, geometry, trigonometry, statistics, calculus, linear algebra), science (biology, chemistry, physics), economics and even the humanities with tutorials on art history, citizens, finance and more. Tinder Bumble OKCupid Everyone is on Tinder these days, and that's what makes this simple hot or not app a good choice for those looking for a date, and maybe something more. We're not big fans of the superficial approach to people at the heart of Tinder, but at the end of the day it's up to you to shape your relationships with people. IMDb is the largest film database in the world and therefore an indispensable tool for film lovers. Movie trailers, casts, reviews and all sorts of movie paraphernalia adorn IMDb's free movie app, more than enough to give it a place on this list. Tasty has arrived and taken over the cooking app world like a storm: suddenly and unexpectedly. It's a great little app with its cool videos and it's our best choice for most people out there. Yummy is our second favourite application for cooking, and while there are many others that are just as great, we highlight Yummy for its fantastic filters that allow you to easily discover dishes from different styles and kitchens. SimpleFast is a more sophisticated application with a paid annual for those who want recipes from proven chefs and with proven excellence. Then we also have the neat simple recipe book, which is also a great option. Yelp is another service that has grown thanks to the excellent reviews of its users. Whether it's reviews for a fitness club or a restaurant, there's a good chance that Yelp will help you make the right choice not only in the United States, but also in most English-speaking areas. Areas.
